

Physics Colloquium

Dr. Nima Arkani-Hamed
Harvard

Title: Physics, Cosmology and the Large Hadron Collider

Abstract: The Large Hadron Collider is set to begin operation in 2008. It will shed light on a number of mysteries in fundamental physics and cosmology that have been the subject of theoretical speculation for nearly thirty years. In this talk I will describe these questions and the ideas they have fueled, and discuss what the LHC can solidly tell us by 2013.

Monday October 22, 2007 4:10-6PM - Rm 55 Roessler
