**University of California Berkeley**

**Title: Observational Signatures of the String Theory Landscape**

**Abstract: I will discuss progress and problems in deriving predictions from the landscape of string theory vacua, focusing particularly on predictions relevant to observation. As an example, I will discuss whether string theory predicts measurable spatial curvature.**

**Thursday September 27, 2007**

**Time: 12:10 PM**

**Place: Room 416 PHY/GEO**
